(54) FALL-THROUGH TELEPHONE NUMBER LIST

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a communication user terminal capable of easily and user-friendly access a large database.
 SOLUTION: An internal database has several storage places IA1, ..., IA5, ... and each of storage places stores call reference to be selected as a calling number by a search key inputted from a keyboard KB of a telephone set by a user. The internal database further has an additional storage place XE and the storage place XE stores additional call reference to a second database TDS and is used when matching with the other call reference is not found. The second database is an external telephone number service to be controlled by an operator or service provider. The internal and external databases are mutually complemented by a method transparent for the user.
